Librarianship and Information Studies Series

The authors in this series deal in a practical way with the problems faced by libraries and information scientists that have been the subjects of research within past years. The results of the latest research are analysed, discussed and related to real situations. Workers at centres of study of librarianship and information science will, through this series, be presented with invaluable aids to further research; librarians and information scientists 'in the field' will also find much food for thought.

1. Computer-based information services in science and technology: principles and techniques.

M. F. Lynch

96pp., 234 x 156mm, casebound, 1974, ISBN 0 901223 55 7,
£3.65 UK, $ 9.00 Americas, £4.30 Elsewhere

This book covers the application of computers to the major information services in science and technology. Coverage is given to the problems of character representation and transformation during input; storage and output; data and record description and storage structures; and typical filehandling systems and file manipulations. The role of computer type-setting in the production of publications is described at some length, as are the characteristics and implementation of information-retrieval services.

2. Asian and African collections in British libraries: problems and prospects

A. Benewick

139pp., 234 x 156mm, casebound, 1974, ISBN 0 901223 48 4,
£6.20 UK, $ 14.50 Americas, £7.25 Elsewhere

This book discusses the administrative problems of establishing and maintaining Asian and African collections in Britain. Particular emphasis is placed on acquisition, interlibrary co-operation, bibliographical control and finance. The impact of area collections on general library techniques, and the prospects for area collections, from the viewpoint of developing adequate national provision for them, are also discussed.

3. Languages of indexing and classification: a linguistic study of structures and functions

W. J. Hutchins

160pp., 234 x 156mm, casebound, 1975, ISBN 0 901223 68 9,
£8.00 UK, $ 19.00 Americas, £9.35 Elsewhere

Within the broad field of information science, the problems of indexing and classification continue to occupy positions of central and crucial importance. In recent years there have been impressive developments in automated information-retrieval systems, but these have not led to any lessening of interest in indexing and classification theory, although understanding of these basic processes remains inadequate. This volume contributes to the understanding of the fundamental questions of the nature of indexing languages—how they work and why they sometimes fail. This book is an examination of the basic features of the theoretical issues of indexing and classification in terms of linquistic structures and functions, and assumes that readers have some knowledge of the languages of documentation and the problems of indexing and information retrieval.

4. Libraries for the blind: an international study of policies and practices

D. E. Schauder and M. D. Cram

152pp., 234 x 156mm, casebound, 1977 ISBN 0 901223 91 3,
£10.00 UK, $ 23.50 Americas, £11.70 Elsewhere

This study reviews contemporary practices, policies and trends in library services for blind and partially sighted people. Most available accounts of such services have confined themselves to a particular country, reading medium or technical development. This study, however, can be said to be truly international, and extremely comprehensive. The authors, both practising librarians, present the results of research which included many visits to libraries for the blind and related organisations, from which valuable information was gained that was not readily available except by personal contact. Furthermore, their literature search extends up to 1976, resulting in an extensive bibliography. The book can be used equally as a textbook for students of librarianship, or as a guide for practising librarians.

5. Information management

D. Mason

121pp., 234 x 156mm, casebound, 1978, ISBN 0 906048 15 2,
£7.50 UK, $ 18.00 Americas, £9.00 Elsewhere

This volume is a highly practical guide to the management of industrial information services. From the premise that the information manager should take a positive approach to his company's information needs, the author discusses the managerial problems of establishing and running an information service within a company and emphasises practical techniques for their solution. Location, planning and finance are some of the topics covered. Several case-study excercises are given to underline the text, and key texts for further study are appended to each chapter. Although written primarily for industrial information managers and for new entrants into industrial information services, this volume will be of interest to all who work in, or are responsible for, information services.
